Sahil Patil

+91 8104910220 sahill.p171@gmail.com LinkedIn GitHub

Information Technology graduate with practical experience building full-stack web applications across the frontend and backend. Comfortable working with React, Node.js, Java, and Python, developing REST APIs, integrating third-party services, and creating responsive, user-focused interfaces. I enjoy turning ideas into reliable, working products end to end.

Education

Saraswati College of Engineering — Kharghar, Maharashtra
Bachelor of Engineering in Information Technology — *2026*

ALC Junior College — Palghar, Maharashtra
Higher Secondary Certificate (Science) — *2021*

PJ Highschool — Palghar, Maharashtra
Secondary School Certificate — *2019*

Technical Skills

Languages: Java, Python, JavaScript/TypeScript, SQL, HTML/CSS

Frontend: React, Tailwind CSS, Responsive Design

Backend: Node.js, Express.js, Spring Boot, REST APIs, Authentication, API Integration

Databases & Developer Tools: PostgreSQL, MySQL, MongoDB, Redis, Git, Docker, Linux, VS Code, Visual Studio, Hardhat, Testing, AI/LLM APIs (OpenAI, Mistral AI)

Projects

Spiritual AI | **Python, Flask, Mistral AI, HTML/CSS/JS**

- Built and deployed a full-stack AI-powered spiritual guidance web app drawing wisdom from the Bhagavad Gita, Holy Bible, and Holy Quran using Mistral AI (LLM).
- Implemented 7 features: Ask Guidance, Spiritual Journal with AI reflections, Daily Horoscope, Numerology, Meditation Timer, Pomodoro Focus, and Contact Form.
- Deployed on Render with Gunicorn, Docker support, environment-based config, and production-grade error handling — live at spiritual-ai-tfqk.onrender.com.

NeoMarket | **Solidity, React.js, ethers.js, Hardhat, IPFS/Pinata**

- Built a production-grade decentralized NFT marketplace on Ethereum supporting fixed-price listings, timed English auctions with anti-sniping logic, and configurable creator royalties (0–10%) enforced on-chain.
- Implemented a pull payment pattern across all transactions to eliminate reentrancy vectors, alongside `ReentrancyGuard`, input validation, and Solidity 0.8.20 overflow protection.
- Developed a full React frontend with NFT minting wizard, auction countdown UI, portfolio management, and skeleton loaders; integrated IPFS via Pinata for decentralized metadata and image storage.
- Wrote a comprehensive Hardhat test suite covering minting, listing, buying, and auction flows; configured deploy scripts to auto-update frontend contract config on each deployment.

DevFlow | **MERN Stack, TypeScript, Socket.io, Redis, Docker, OpenAI**

- Architected a full-stack SaaS project management platform in a monorepo (Turborepo/pnpm) with React + Vite frontend, Express.js backend, MongoDB, Redis pub/sub, and Socket.io for real-time collaboration.
- Built end-to-end authentication with JWT refresh tokens, GitHub OAuth, role-based access control, and workspace invite flows.
- Integrated OpenAI API for AI-powered features including code review, sprint planning, bug detection, and documentation generation with streaming responses.
